RISE IN FERTILIZERS

V. M. HOLISTER OF VALLEY SUPPLY COMPANY SAYS WAR HAS AFFECTED PRICE

V. M. Hollister, formerly of Seattle, Wash., where he was assistant manager of one of the large wholesale houses,but now one of the partners and managers of the Valley Supply company, says that the war in Europe has indirectly affected the prices of all fertilizers. "It might have been expected," said Mr. Hollister, "that there would be a slight rise even in native fertilizers when the foreign fertilizers have risen so high on account of the war. Potash and sodium, which came in large part from Germany, rose several hundred per cent in price and sympathetically affected the native products and afterward on account of the demand for native fertilizers the price advanced still further.

"On the whole, however, I think it is to the credit of the manufacturers that the price has not been artificially advanced. Cottonseed meal forms the bulk of the nitrogenous substances entering into commercial fertilizers. During the past thirty days cottonseed meal has advanced five cents. The amount available for fertilizer use is dependent upon the annual production of cotton and the demand for the meal for feeding stuffs. There has been a considerable demand for cotton for war purposes; yet, on the other hand, there has been a limitation in the output on account of the stoppage of shipments to Germany. On the whole, however, the cotton situation has been fair and the price of cottonseed meal has not been unreasonably high.

"The supply of dried blood and tankage, also sources of nitrogenous material, is dependent on the number of animals slaughtered. Only a few large packing concerns conserve these products, which are now used to a considerable extent as cattle feed as well as for fertilizers.

"Investigations of the Bureau of Soils have shown that there is a large amount of waste from the fisheries and fish canneries, especially on the Pacific coast and in Alaska. This material could and should be made into fish scrap, which would have a value of about $1,200,000 for fertilizer purposes.

"Owing to the demand for nitric acid for ammunition purposes the price of nitrate of soda advanced considerably during the first year of the war and a great deal more since 1916 dawned.

"Nitrogen is produced also from ammonium sulphate. This is a by-product in the destructive distillation of coal for the preparation of coke. The nitrogen contained in the coal is evolved as ammonia and is caught and neutralized with sulphuric acid. Formerly all coke was made in the beehive oven, which did not provide for the confinement of the combustible gases produced. The ammonia was thus lost. Now, however, the domestic production of ammonium sulphate from the coke oven is only one-fifth of what it would be if the beehive oven were displaced by modern methods of production.

"Nitrogen is found in garbage and it has been shown that if the garbage of all the cities having a population of more than 30,000 and up were converted into garbage tankage, the product, as fertilizer, would be worth $3,500,000. Steps have been taken, I believe, to utilize this valuable waste matter. I do not look to any great fall in the prices of fertilizers until after the war."

BURNING RUBBISH

Various complaints regarding the annoyance caused neighbors by the burning of rubbish have recently been made to the police. In a majority of these cases all that was needed was a little care to have avoided the complaint. In a brisk breeze fragments of burning rubbish have been carried over into neighboring lots and have caused annoyance. The police enjoin special care in this matter, which might easily become serious.

APPEAL FROM RECORDER'S COURT

Through his attorney C. Hoeppner, Dr. J. R. Leadsworth, of N. Central avenue, has taken an appeal from a judgment rendered against him in Judge Whomes court, June 26, by which he was ordered to pay to William Morgan of Morgan's dairy, the sum of $63.82 with $6.80 costs. The appeal has been taken to the Superior court.

WEATHER FORECAST — Cloudy tonight and Tuesday along the coast; warmer; westerly winds.

MUSIC AND ART

MRS. SLOAN'S GLENDALE ACADEMY GIVES RECITAL SATURDAY

There were many beautiful features in the recital given by the students of the Glendale Academy of Music and Art, Saturday evening, at the academy on Myrtle street. Mrs. Coral Harrison Sloan, the president, deserves the greatest credit for having brought her students to such a pitch of perfection. Wonderful precision and well-grounded knowledge was shown by the various pupils in their different parts.

Gladys Lowe, Martha Meyer, Gladys Sparr, Clover Johnson, Charlston White, Dorothy Sparr, Mildred McKee, Alma Beckman, Kenneth Cousins, Marian Grey, Carolyn Grey, Lilian Mason, Roy Jefferson, were heard in different piano pieces and all manifested excellent knowledge of technique and a thorough acquaintance with their subjects. Careful training and constant practice had brought each to a point of remarkable development and one scarcely knew which to admire most, the faithfulness of the students or the painstaking teaching of Mrs. Sloan.

Among the special features of the evening were a dramatic presentation of Longfellow's "Sandolphon" —The Angel of Prayer. This beautiful poem was read by Mrs. Sloan with great beauty of tone and sympathy of interpretation and was illustrated in harmonic poise by four talented children, Alice Ewin, Clover Johnson, Florence Rattray and Alma Beckman. Dressed as angels in floating drapery the little ones in the subdued light of one of the verandas gave a striking illustration of the poem.

Patricia St. Clair, who is a little child of something over five years, showed the result of good training in Aesthetics, Emotional and Plastic poses, interpreting various human emotions as Mrs. Sloan gave the word of command, with remarkable understanding. This little child also gave two clever readings throughout the evening, "I Think My Folks Are Very Queer" and "Where Did You Come From Baby Dear."

Margery Yarick played Dvorak's "Humoresque" and gave a wonderful demonstration of technique by Duvernoy. Constance Domsler gave two Grieg pieces with rare taste. Miss Ethel Schramm played Rachmaninoff's difficult Prelude in C Sharp Minor with wonderful skill. Mrs. Gertrude Follansbee gave a reading "The Author's Reading at Bixby" with considerable cleverness and was enthusiastically applauded.

One of the most pleasing numbers of the evening was the singing of Florence Rattray, who is the possessor of a voice of most remarkable purity and is also gifted with a perfect musical ear. This little girl sang "Kathleen Mavourneen" with remarkable taste and expression and at the close of the evening sang "The Perfect Day" with wonderful sweetness. Both songs were sung without accompaniment.

This unique and most entertaining and interesting recital was attended by the parents and friends of the pupils who filled the large audience rooms and were delighted with the whole affair. Mrs. Sloan was called on toward the close of the evening and gave a humorous piece in Italian-English, with wonderful dramatic power, and kept her audience in roars of laughter.

The close of the program was a beautiful exhibition of Greek Rythmics on the lawn in front of the academy, under colored lights. This beautiful dance illustrated "Descending Night" and was taken part in by Charleyne White, Patricia St. Clair, Alma Beckman, Florence Rattray, Iris Bannock, Lillian Mason, Clover Johnson, Elizabeth Mason, Alice Ewin and Martha Meyer. Congratulations were showered on Mrs. Sloan for the wonderful success she has had with her students.

JOINT C. E. MEETING

Christian Endeavorers of the Presbyterian church assembled in a body in the First Lutheran church, corner of Isabel and Third, Sunday evening, for the purpose of holding a joint session. The Endeavorers of the First Lutheran church were also present in their full strength. The meeting was under the charge of Miss Fern Porter, who handled the work with great tact and knowledge. The meeting was characterized by earnestness and by the evidences of research on the part of the members of both classes. One of the special features of the evening was a prayer-poem on "Consecration of Purpose" written and delivered by Mrs. John A. St. Clair, of the Lutheran Endeavor society.

BRITISH TAKE GERMAN POSITIONS

GEN HAIG'S MEN TAKE STRONGLY FORTIFIED POSTS IN THE DIRECTION OF TRONES WOODS

(Special Service to Glendale Evening News)

LONDON, July 10.—Gen. Haig announced today that part of his troops had stormed and taken the important woods at Trones and other neighboring points where the Germans had strongly fortified positions. The Teutons mustered up strong forces and sent them forward in a great attack but they were repulsed with great loss and the captured positions consolidated.

FRENCH DRIVE IS NEARER PERONNE

TROOPS OF REPUBLIC WITHIN TWO MILES OF STRONG GERMAN POSITION

(Special Service to Glendale Evening News)

PARIS, July 10.—Within two miles of Peronne, the great German base and first objective of the offensive of the Allies, the French troops are preparing for a series of final assaults that will give this important storehouse of supplies for the German army into their hands and will enable them to get astride of the railway which is supplying the Germans in this quarter. The positions on the river side at Peronne have been enormously strengthened during the past year by the Teutons and the key city of the Noyon salient will not be taken easily.

FIGHT AGAINST INFANTILE PARALYSIS

PUBLIC HEALTH SERVICE ASKS CONGRESS FOR $100,000 TO COMBAT FATAL CHILD SICKNESS

(Special Service to Glendale Evening News)

WASHINGTON, D. C., July 10.—New York is alarmed by the persistence of the present epidemic of infantile paralysis. It has not been possible to control it as yet. Nineteen deaths and eighty-eight new cases were reported today. Altogether there have been 224 deaths and 980 cases. The Public Health Service is to ask Congress for $100,000 for the purpose of fighting the disease. The Service also asks permission to draft for service any physicians whom it may require should the disease continue to spread to other cities.

SEVENTY THOUSAND U.S. TROOPS AT BORDER

AMERICAN MILITIA ARE CONSTANTLY ARRIVING AT VARIOUS STRATEGIC POINTS ALONG THE BOUNDARY

(Special Service to Glendale Evening News)

SAN ANTONIO, Texas, July 10.—It is stated that seventy thousand troops of the United States militia and regulars are now stretched out along the Mexican border. This number is being increased every day by the arrival of fresh troops from the different states.

FICKLE MULTITUDE CHEERS WILSON

SAME AUDIENCE SHOUTED VOCIFEROUSLY FOR COL. ROOSEVELT TWO MONTHS AGO

(Special Service to Glendale Evening News)

DETROIT, July 10.—Eastern papers are sneering at the fickle multitude of Detroit which shouted for President Wilson's peace address, at the World's Salesmanship Conference, here today. President Wilson addressed 3500 at the great gathering. The majority of these, it is stated, were men who had heard Roosevelt's famous speech for preparedness and had cheered it to the echo. One of Wilson's striking statements was, "You must respect the sovereignty of Mexico."

GERMAN SUBMARINE IS MERCHANTMAN

WASHINGTON AUTHORITIES SAY VESSEL THAT CROSSED ATLANTIC IS NOT ARMED

(Special Service to Glendale Evening News)

WASHINGTON, D. C., July 10.—The German submarine Deutschland that crossed the Atlantic landing at Baltimore Sunday night is believed to be a harmless merchantman and to carry no arms of any description. No guns of any kind are aboard. Captain Kairig, the commander of the submarine, stated today that there are other submarines that will follow this one. He said that the next to arrive would be the Bremen, which is a bigger boat than the Deutschland, which is 315 feet long.

WANTS U. S. TO BUY LOWER CALIFORNIA

REPRESENTATIVE CALDWELL INTRODUCES RESOLUTION FOR COMMITTEE TO OPEN NEGOTIATIONS

(Special Service to Glendale Evening News)

WASHINGTON, D. C., July 10.—Representative Caldwell introduced a resolution today asking Congress to appoint a committee of five men to negotiate with Mexico concerning the purchase of Lower California. The proposal is not new and tentative propositions of this nature have already been rejected by the Mexicans.

UNIQUE SERVICE

SUPT. AND BOYS FROM STATE INSTITUTION AT FIRST METHODIST CHURCH

The service last night at the First Methodist church was both unusual and unique. Mr. Fred C. Nelles, superintendent of the Whittier State School and a group of boys from the institution provided the program for the evening. The boys gave a musical program which was highly appreciated by the great congregation. The ensemble, solo and duet numbers were well rendered. The influence of the school is evidently making itself felt in shaping the lives of the boys.

Mr. Nelles spoke on "The Unusual Boy and Our Opportunity." His address was intense in its appeal and made all present feel how near the subject came to every home. He emphasized the fact that the school should be made preventive instead of corrective. Where the possibilities are that a boy will become a delinquent he should be cared for before that state arrives.

The speaker showed how the public was related to delinquency by its lack of consideration for different mentalities. The school takes the boys and endeavors to give them home influences instead of herding them all into one building. For this purpose the cottage idea is being worked out. Fourteen trades are offered the boys. Corporal punishment is abolished. Direction and not repression is the aim.

Every city should have a psychological clinic in connection with its schools. Thus the children could be treated on the basis of mental powers.

The address was illustrated with charts and diagrams showing family conditions and the effect of heredity.

The church was crowded to the doors with an intensely interested congregation.

SEVENTH-DAY ADVENTIST

Christians ought to learn a lesson from the advancing Allies in Europe, according to Elder G. A. Snyder, pastor of the Glendale Seventh-day Adventist church, at Third and Isabel streets. Speaking in the church at the regular service last Saturday morning, he said the ordinary Christian is too much inclined to be satisfied with past victories against evil, and to settle down in camp rather than charging the enemy.

"Too many Christians are willing to live in a past rich religious experience," said the minister. "We ought to be advancing continually. Were the Allies satisfied when they had captured a town? No. They fortified it, and made it a base for still further advance. Said the apostle Paul, "This one thing I do, forgetting those things which are behind, and reaching forth unto those things which are before, I press toward the mark for the prize of the high calling of God in Christ Jesus.' So ought every Christian to do.

"When we settle down in our past experiences we may think we are holding our ground. Really, we are permitting the enemy to steal a march upon us. We must either advance or retreat.

"Years ago an Eastern man was experimenting to make a machine which would reproduce the human voice. Finally, one day, he gathered his few helpers into his laboratory to witness the supreme test which would spell success or failure. He repeated into the machine the well-known rhyme of Mary and the Lamb. After a few moments of breathless waiting, the little company heard the words repeated by the machine in the very tones in which Mr. Edison had spoken them. It was a grand attainment, but instead of being satisfied, the great inventor used it as his stock in trade for producing something better. We all know something of the perfection to which the phonograph has been brought.

"If in material things men are willing to give time and thought and energy to the perfecting of that which will benefit mankind, ought not Christians to take time, and give thought to spiritual advancement, when eternal life awaits those who are conquerors over evil?"

Services will be held at the Seventh-day Adventist church next Saturday morning at 11 o'clock.

CHAMBER OF COMMERCE

A meeting of the Chamber of Commerce will be held on the evening of Tuesday, the 11th instant. This is an important meeting and we hope all members that can will be present. The Ivanhoe bridge, the lowering of car fares and other things will be brought before the meeting.

BROWN IS PRESIDENT

GLENDALE MAN ELECTED TO HEAD OF STATE CHRISTIAN ENDEAVORERS

At the meeting of the State Christian Endeavor convention held at Stockton last week Howard L. Brown, of Glendale, was elected president. The convention closed Sunday night. Mr. Brown is a member of the First Congregational church Christian Endeavor society and went to Stockton as a delegate along with Ernest D. Schuyler. The congregation and Christian Endeavor society of the First Congregational church sent a telegram of congratulation to Mr. Brown. The convention has been a most successful affair, more than 3,000 delegates being in attendance.

AUTO LEFT ON STREET

Mr. J. Kennedy of Los Angeles drove into Glendale Saturday, in his Overland car, on business and impressed by the moral air of the town and its wonderful reputation for good behavior, the fame whereof has been carried abroad throughout the whole of Southern California and even unto the regions around San Francisco, left his car standing on the street, at the corner of Colorado and Glendale, and went on his business rejoicing in the honesty of the city he had entered. After the car had stood on the street some hours its presence was noted and it was concluded that some of the auto thieves or joy riders from the wicked city of Los Angeles had taken the car and had abandoned it in this place. The car was taken to police headquarters, where it remained until Sunday morning. It was then claimed by Mr. Kennedy, who proved ownership.

EICHOLZ-WILSON MEETING

Editor Eicholz of the San Fernando "Democrat" and a few of his friends appeared on the streets of Glendale Saturday evening in the interest of John T. Wilson of San Fernando, candidate for supervisor. The meeting was preceded by an entertainment by a comedian, apparently an amateur. Mr. Eicholtz made the main speech of the evening and in the course of his remarks wondered why the Glendale community could be so thoroughly for their home candidate, Mr. Packer. He said, in his mind, there were only three recognized candidates in the race, viz: Packer, Wilson and Roberts. He does not like Roberts because he became councilman of Los Angeles with the pretense that he would work for the reduction of city taxes when the result has been just to the contrary. He does not like Packer because he has so many friends in the district. He thinks because Eicholz and the San Fernando Democrat are backing Wilson that Candidate Wilson is the right kind of a man for the job.

In fact, the speaker seemed to be considerably "stuck on" Eicholz, probably rather more so at this stage of the program than he will be after six week's campaigning. The questions went around among the forty or fifty people present, "Who is Eicholz?" "Where did he come from?" "What standing has he in this district?" "What is his past record?" The speaker being almost an entire stranger to those present, these questions went unanswered.

Mr. Wilson, the candidate, was permitted by Eicholz to make a few remarks. Candidate Wilson is a fine appearing gentleman and assured his hearers that he is well acquainted with conditions in Los Angeles county, having resided here more than forty years. He is not pleased with the way the county is conducting things at present and if elected he promises to overrule the other four members of the board and do things according to Wilson's notion. The plan is a good one providing the other four members of the board will have no say in the matter.

Mr. Wilson has no copyright on the tax reduction "spiel" as all of the candidates have that as one of the principal planks in their platform. So it is safe to say, as far as promises go, they are all upon the same equality on the question of tax reduction.

Glendale citizens had planned to give the San Fernando people a very courteous welcome, but their man Eicholz delivered the welcome address, made the response to his welcome and then attempted to serve as orator of the evening. With no one to blame but themselves the visitors drove away quite dissatisfied with the results of the meeting.

There are some people whose smile, the sound of whose voice, whose very presence, seem like a ray of sunshine, to turn everything they touch unto gold.—Lord Arebury.

GLENDALE, CALIFORNIA, MONDAY, JULY 10, 1916

PACIFICATION OF SANTO DOMINGO

Because the situations in Mexico and in Europe have attracted public attention but little interest has been taken by the general public in the drift of affairs in the republic of Santo Domingo. Just about the time that the crisis with Mexico became acute, President Wilson ordered 1000 marines, who were stationed at San Diego, to sail for Santo Domingo, where they were to take part in the pacification of that republic.

It appears now that the force of American soldiers and sailors in that island has so far reduced the native population to submission and order that there is peace once more in the republic. Santo Domingo is an island in the West Indies, one-third of which is occupied by the black republic of Haiti and the other half by the black republic of Santo Domingo. In the old days of the pirates the island was a famous rendezvous.

Santo Domingo was discovered by Columbus about two months after he had landed at San Salvador in 1492. It is an island that has many advantages. Its climate is pure and where precautions are taken to screen the houses and to drain and level the marshes the yellow fever mosquito and the malarial mosquito have vanished. The Haitian republic is under the protection of the United States and it seems that the larger sister republic will also pass under the domination of this country. This will be greatly to its benefit as the misrule of the island has only been varied by rapid changes of government and the exploitation of the people by various adventurers.

Long ago it was proposed in the United States congress to take over the whole island, but the measure was defeated. At that time the problem might have been settled and the island have had a long history of prosperity under American rule had not the narrowness of political feeling prevented the plan from being carried out.

What will be done at present it is difficult to say. Secretary Seward, the man who bought Alaska for $7,000,000, was the man who proposed in 1867 to annex the island. President Grant was later on interested in the matter and sent Gen. Babcock to examine and report. The treaty was actually drawn by which on the payment of $1,500,000, the Dominican government was to become United States territory. The United States congress through opposition to President Grant refused to ratify the treaty, although the people of Haiti were anxious to come under United States protection.

The Dominican government made representations again in 1874 to the United States for annexation but no attention was paid to them. Up to this moment the United States, which has made itself morally responsible for the good behavior of the two republics, has paid out in expeditions, interventions, landing of marines and frequent encounters with the revolutionists much more than the petty sum asked for annexation.

At present there are more than 3500 American sailors and marines in Santo Domingo and the expedition is costing this country quite a considerable sum daily, although the experience may be valuable for the navy. It would seem that it would be well to settle the matter once for all and give the island a decent government under the protection of the United States, eliminating disorder, rebellion and destruction of property and American losses of investments in trade.

CO-OPERATION IN RUSSIA

Russia is a great deal farther advanced than many people would believe. The condition of its people while leaving much to be desired is a great deal better than it is often pictured. One of the elements in the national life that is looked to to relieve many of the disabilities of the people is co-operation. Co-operation in Russia began in 1865, shortly after serfdom was abolished and half the land turned over to the free peasants.

First attempts in the line of co-operation took the form of co-operative credit concerns. These, though numerous, were independent of each other and remained for a long time quite feeble. In 1870 Vassilchikog became interested and with M. Yakoulef, of Moscow, founded in that city a Committee for Village Co-operative Society work, the object of which was to promote co-operative societies all over the empire; get them started, advise and help them.

Two years later the Petrograd department was opened and soon outstripped the parent concern which, for many years, stood practically still. At first the Russian government encouraged the movement, helping it to get under way, although until recent years progress was still very slow and uncertain.

During the past ten years, however, progress has been most gratifying. Societies have sprung up on every hand. There are 14,000 of them, and in addition to the credit co-operatives, there are Producers' and Consumers' societies from one end of the country to the other. In Siberia alone there are more than 1500 societies. All three kinds—credit, producers and consumers—are strongly represented. They own their own lines of steamers; have a bank in London, England; and despite the war did an $18,000,000 business in 1915.

Those who think of Siberia as a vast stretch of snow and ice, where men and women in chains toil incessantly in the mines, may well consider this phase of the country's life. The Siberian co-operative stores are typical of the rest. The peasants deal chiefly in butter and to aid the sale of their product they saw that they must have a market. They were not long in getting it. Their product is now sold in London and brings a good price.

Everywhere co-operation has wakened up the land. The people are now better off than they have even been and with the spread of the system much of the old poverty of the helpless peasant has disappeared.

BIRD HOUSES IN GLENDALE

All over Glendale the results of the mission work for bird preservation done by the Glendale Garden society and its active president, Mrs. Nanno Woods, may be seen. The gardens show various forms of bird houses. In hundreds of gardens water is put out where the birds can get it. This is an excellent movement. The children are now taking an active interest in the birds which formerly they greeted with stones. Parents are discouraging the destruction of birds and the small child wherever reached has been easily persuaded that the air gun is a dangerous and pernicious weapon. They have learned that it is not fair to steal a bird's eggs from her nest and that a live bird is much more interesting to watch than a dead one. Glendale is in a fair way to produce not only gardeners and arboriculturists, but also naturalists. It is now realized that the work done by the birds in the way of the destruction of obnoxious insects is invaluable.

PRESBYTERIAN CHURCH

Rev. W. E. Edmonds preached in the morning yesterday from the text, found in 2nd Kings 6:6, "And the Iron Did Swim." Prefacing his remarks by a brief story of the miracle performed by the prophet Elisha the speaker said: You may set this story aside with other miracles on scientific grounds if you wish, you can do away with the prophet Elisha, but you cannot do away with the Word of God, and this is a part of it, as are the miracles performed by Jesus at a later date—the Word will stand forever for our Guide in life. It contains much that we cannot now understand because it is a supernatural book. We must at all times remember that the Author of this book is God himself, to whom nothing is impossible. As God is God it is only natural and logical that we should expect from Him, whenever it may serve His purpose, the unusual and unexpected. We change in innumerable ways, but God never does. Elisha was the servant of the great prophet Elijah, and when the latter was about to depart from earth he told his servant to leave him, but this Elisha refused to do and in accordance with his request the mantle of Elijah fell upon him, intensified in power, "A double portion of thy spirit."

And then the new prophet went forth on his way to perform the simple duties of daily life, to do the commonplace things. He restored to life the son of the Shunamite widow, and went to the home of the widow where through his influence, the small supply of oil and of meal did not fail. The day of miracles has not passed, they occur daily. Anyone who has been down in the slums of great cities where the missions are doing all the time a wonderful work, can see miracles of salvation in which apparently hopeless human beings are converted into useful men and women to glorify God by their works. The very definite lesson of this miracle of the floating iron, comes to every one of us. The young man had an axe, it flew off the handle and he was left helpless with an axe handle in his hand that was useless without the axe. The axe combined with the handle represents power, but how many people there are who hold an axe handle in their hands and keep swinging it lustily, accomplishing nothing, or who hold it idly lamenting its uselessness. God alone can give that power; he alone can cause the iron to swim. . . .

Let us get distinctly in our minds the distinction between knowledge and service. There are ministers in the pulpit who have lost their axe, there are members of the congregation who are holding useless axe handles. Are the young people of today looking up to ministers, elders and church members going up and down swinging axeless handles or are they looking up to them with axes of power doing daily the Master's work? Are church members who are devoting God's day to the pursuit of pleasure standing with an implement in their hands to which there is no power? Get back where you belong. Sometimes there are members of the same church who do not speak to one another; how can they meet together at the Communion table unless they make room in their hearts for a different spirit—the Spirit of God.

CERTIFICATE OF BUSINESS

Fictitious Firm Name

The undersigned does hereby certify that he is conducting a manufacturing business at 108 East Pico street, Los Angeles, California, under the fictitious firm name of "E. E. System", and that said firm is composed of the following persons, whose names and addresses are as follows, to-wit:

Alfred L. Lawson, Los Angeles, California.

Witness my hand this 7th day of July, 1916.

ALFRED L. LAWSON.

STATE OF CALIFORNIA, } ss.
County of Los Angeles. }

On this 7th day of July, in the year nineteen hundred and sixteen, before me, James E. Mahon, a Notary Public in and for said County, residing therein, duly commissioned and sworn, personally appeared Alfred L. Lawson, known to me to be the person whose name is subscribed to the within instrument and acknowledged to me that he executed the same.

Witness my hand and official seal.

JAMES E. MAHON,

Notary Public in and for said County and State of California.

OCEAN LINER FIREMEN

When fire breaks out in the hold of a modern ocean liner the fireman who descends to locate the blast is protected from suffocation through the use of an oxygen helmet. Its operation is quite similar to the helmet used in penetrating a fire-ravaged mine.

The constricted quarters in which the ocean fire fighter has to work makes the oxygen helmet a real necessity. Fire hazard on a modern vessel, of course, is not great compared with the dangers existing on the old sailing ships, but it not infrequently happens that some portions of a cargo are susceptible to spontaneous combustion, and this has to be guarded against with great care.

ROSE SLIPS IN HEAVY SOIL

Rose cuttings will not root as well in heavy soil as in a loamy or sandy soil, but where the soil is adobe or quite heavy excellent results can be secured in rooting cuttings if a small amount of sand is available.

First prepare the ground as well as possible, digging it deeply and getting it into a well pulverized condition. Then in planting a rose slip take a round stick like the handle of a shovel or hoe and make a hole with it. Fill this hole with sand and insert the cutting in it and water it.

The rootlets can then easily start in the sand, and before they have grown more than a fraction of an inch they will have reached the heavier, richer soil and will take hold and develop vigorous, sturdy roots in it, growing better than they would in sand alone or in heavy soil alone.

The use of osage orange for making dyes promises to be extensive. The Forest Products Laboratory is making a census which shows that the supply of the wood is more than ample to meet present needs.

EAGLEDALE NOTES

Mr. and Mrs. C. W. Young, of Rock Glen avenue, entertained a party of forty guests at dinner on July 4. Guests from Los Angeles were Miss Schenck and Miss Williamson. Miss Eva Wilson of Pasadena was another out-of-town guest. Those from Glendale were J. D. Horton and Mrs. Horton, W. R. Stone and Mrs. Stone. Fireworks were a feature of the evening on the east pergola. In the evening another 75 guests arrived for the dancing and celebration. Dancing was kept up on the fine outside floor to a reasonable hour. Punch and cake were served.

Mr. Clarence Conrad of Denver is visiting his parents, Mr. and Mrs. Ed Johnson of Ellis avenue.

Mr. and Mrs. James Funderee have taken up their residence in their new house, which they have built on Douglas avenue.

Mr. and Mrs. George Miller are now at home in their new house on Sierra Drive.

Mr. and Mrs. J. Hartley Taylor of Colorado boulevard left last week to spend several weeks in the Yosemite. They are camping within sight of the Yosemite falls and are having a splendid time.

Mrs. Ed Johnson of Ellis avenue has been quite ill for some time. She now, however, is on the way to recovery.

Mrs. F. H. Lerchen, of 115 N. Ellis avenue, is entertaining Miss Bertha Grant of Los Angeles. Miss Grant is a teacher in the Vernon High school.

KENSINGTON CLUB TO MEET

The Kensington club, an active organization in connection with the Woman's Relief Corps, Corps No. 67, will hold a meeting in the G. A. R. hall on Glendale avenue, Wednesday at 2 p. m. There should be a full attendance as matters of importance will be brought up. The hostess of the day will be Mrs. Jessie Hudson, who will be assisted by Mrs. Hibbard, Mrs. Sanford and Mrs. Peck.

CARD OF THANKS

We wish to publicly express our gratitude to all those who profferred sympathy and aid to us at the time of the illness and death of our beloved mother, especially to those who contributed the beautiful flowers.
MR. & MRS. CHARLES FARNHAM,
528 Jackson St.

Experiments with jack pine have shown that it is well suited for making kraft paper. On some of the National Forests this tree is used to plant land which is too poor to grow other timber.

Personals

C. Benner has returned from the M. W. O. A. encampment at Redondo beach.

Harold Benner is spending his vacation in the mountains at Kamp Kole.

George Bentley and Long Beach relatives enjoyed a fishing trip to Little Bear Lake recently.

Charles Benner and family expect to be at their home in Tropico soon. They left Tropico eight months ago.

Violet Mae Benner is a guest of the Herald at Venice and is also visiting friends in that city. Mrs. Benner is attending Madame Coates summer dressmaking school in Los Angeles.

The Rev. R. W. Mottern, Mrs. Mottern and family. of 340 S. Central avenue, motored to Los Angeles today where Mrs. Mottern is to attend the Interdenominational School of Mission Study.

Mrs. Patterson and daughter, former residents of Glendale, but who recently have been making their home in Eagle Rock moved into the Tight apartments, corner of Glendale avenue and Third street the latter part of last week.

Mr. and Mrs. Farrell, 123 E. Broadway, motored to Del Rey Saturday and spent the evening on the beach in that neighborhood fishing. The surf fishing was good and they caught a large number of fish. They returned Sunday evening.

Mr. and Mrs. W. M. Crawford, of 914 S. Central avenue, are entertaining Mr. Paul McGrew of Warren, Ohio. Mr. McGrew, who is a banker, contemplates settling in Glendale. He is living at present in the Y. M. C. A. clubhouse, Los Angeles.

Fred Baker, Jr., and his friend Kenneth Whaley, who have been camping in the San Gabriel canyon during the past week, returned home Saturday night. They have had a pleasant time and have enjoyed all the pleasures of a life in the open air amid the beautiful mountain scenery.

Mr. and Mrs. Blake Franklin, Mrs. Franklin, Sr., and the Franklin family, motored to Lyon Springs, a week ago and returned Saturday night. The Springs is 88 miles north of Glendale, and is not far from Nordhoff. It is 35 miles distant from the town of Ventura. The party spent a pleasant week fishing in the Ventura river and catching the limit several times. The road to the Springs is rather rough but when the place is reached it is delightful. It stands at an elevation of 3000 feet.

WEST GLENDALE W. C. T. U.

The West Glendale W. C. T. U. will meet Tuesday afternoon at 2:30 at the home of Mrs. Florence Smith, 1331 W. Seventh street. This is the usual monthly meeting. There will be a program. Look for the flag at the residence.

WOMEN'S RELIEF CORPS

Corps 67, W. R. C., will hold its regular monthly meeting, Friday afternoon, at 2:15, in the G. A. R. hall, Glendale avenue. This will be the occasion of important business and every member is expected to attend.

THE GREEKS OUTDONE

The American boys, even city boys are often developed better physically than the ancient Greeks and all their records except one—the broad jump with weights, which is not practiced to any extent in the United States—has been evidenced by New York City schoolboys. This was discovered recently when sixty boys, equal to the best of the Greeks, were needed for a Shakespearean masque in the great outdoor stadium of the College of the City of New York.

It was no long and discouraging task to find these boys. On the contrary 200 applied at the first opportunity. Practically all of them not only met but surpassed the best of the ancient Greek standards, both in measurements and physical tests. Civilization, which has freed us from the superstition relative to exposure and torture in developing strength and courage has, of course, brought with it possibilities of ease and softness unknown to earlier peoples; but the advantages of sanitation, better food, and better knowledge of how to live seem to have more than compensated for any of the disadvantages.

"INDIAN DAY"

Red Fox James, highly respected Indian, is urging observing "Indian Day," which the Society of American Indians, at their conference at Lawrence, Kansas, suggested to American people.

Red Fox James has traveled by pony over four thousand miles collecting governors' endorsements.

"According to recent figures, more than one hundred million people in Asia and Africa are not included in the evangelization plans of any missionary agency. There is work for every man and every woman in western lands, who seeks to find a useful sphere of service in foreign countries."

ORIGIN OF HUMAN LIFE

O. H. JONES SAYS ELEMENTS OF NATURAL BODY HAVE BEEN WEIGHED AND NAMED

The oldest authority on the nature and origin of human life is the Book of Genesis, in which we are told that "the Lord God formed man of the dust of the ground, and breathed into his nostrils the breath of life; and man became a living soul."

Modern science teaches us that the human body is composed of fifteen chemical elements, material, physical, earthly matter, such as the dust of the earth consists of; and that these 15 elements are variously combined into many complex compounds. Therefore, in studying the human body, it becomes necessary for us to eliminate everything else from our thoughts, and confine our attention strictly to earthly and material things.

Whatever may have been our preconceived ideas, opinions or thoughts regarding the sacredness or the hallowedness of what many have been pleased to call the human form divine, caused largely by ignorance, superstition, and false teachings, must now be laid aside, owing to the light that has been shed upon this subject by the work of modern scientists.

In this field, as in all other fields of scientific research, experimentation and exploitation, modern science has made wonderful progress. Within the last twenty-five years scientists have so increased our knowledge relating to animal life, and the functions and needs of the human body, that we are no longer chained down by the ignorance and superstition of the dark ages, but have come to know the human body as it really is, and make the science of life an exact science.

All elements composing the human body are well known to scientists. Its daily needs are matters of common knowledge to them. Science has separated the human body into its various chemical elements or parts, and weighed and named them; it has also analyzed and separated its food or fuel into its various chemical elements or parts and named them. And all the laws that govern its growth and functions are well known to scientists. And these laws are known to be the same chemical and physiological laws that govern all animal life. Therefore there is no reason to suppose that there is any more sacredness attached to the dust of which the human body is composed, than there is to the same chemical elements combined into any other animal body.

While the human body, even as we view it today by the light of modern science, is the most wonderful structure of which we have any knowledge, it still remains as a simply chemical proposition, although it is, "The wonderful house not made with hands." We are told by the Divine Builder, that he made this house out of the dust of the earth; and He ought to know. In this case it is not the house that has the honor, but the tenant that inhabits the house. It was built as a temple for the most high.

We are told that "There is a natural body, and there is a spiritual body." We have nothing to do with the spiritual body in these studies.

The natural body came first in point of time. That is what Jehovah formed in the garden of Eden, and it was into that lump of clay he breathed the breath of life. And that is what concerns us today, and what will concern us as long as we remain on this terrestrial hemisphere—this material, natural, physical body of man.

While woman does not appear to have been a part of the general scheme of creation as chronicled by the sacred record, but came in as an afterthought, or side issue from man, who is generally considered a tough proposition—she generally gets there just the same, and with both feet. While the record does not so state, we presume that she also became a living soul; although some prefer to call her either a peach or a lemon. But, gee, how men do love to squeeze that lemon.

The general frame work of the body is built mainly of a series of bones, 206 in number, supplemented, however, in certain regions by pieces of cartilage. The bony part of the frame work constitutes the skeleton.

The complete structure of the human body consists of bones, cartilage, ligaments, cords, tendons, muscles, facia, membranes, heart, lungs, kidneys, organs of digestion, consisting of the mouth, teeth, tongue, esophegus, stomach, duodenum, large and small intestines, lymphatic vessels including arteries, veins, arterioles, capillaries, glands, organs of procreation, skin, hair, blood, lymph, serums, plasma, digestive juices, or ferments, etc.

For a more complete description of the body and its functions, study some advanced work on anatomy and physiology.

All the foregoing named parts of the human body are made up of structural units or cells assembled in vast numbers. (See previous articles on cells). These cells produce other cells by the process of division. Growth is promoted by the multiplication of these cells. But these cells are not all of the same kind. The building up of the human body may be likened to the building of a modern skyscraper, as it requires artisans from many different trades to construct a modern office building, so it requires workmen or artisans of many different occupations to build up the human body. One kind of cells form the bones, another the muscles, and so forth. And each one of all these different classes of cells or workmen contain within themselves the same kind of material as that contained in the part or kind they build up or repair. For instance, the cells that form the bone must be supplied with the elements that bone is made of; and those that make muscle and nerves must be supplied with the elements that make nerves and muscles. And it is the same throughout every part of the body.

The human body is composed of material, physical matter. The complete body consists of fifteen primary elements, in varying amounts, and chemically combined into a number of different compounds.

Careful chemical analysis of the substances of which the human body is composed, shows that it consists of a few special forms of matter, as follows: Oxygen, carbon, hydrogen, nitrogen, calcium, sodium, magnesium, manganese, iron, flourin, phosphorus, potassium, sulphur, chlorin and silicon. Each one of these elements is found in some part of the body, in exact definite amounts; and has some definite and some important part to fill in the body economy. Each and every one of these fifteen elements is absolutely essential in the formation and maintenance of a typical, normal, perfect, healthy body structure. Sound growth cannot proceed without them.

It must be constantly borne in mind, that all growth, development, and repair, is due wholly to the food consumed; and that the food consumed must contain each and every element of which the body is composed, and in right quantities, otherwise healthy growth and repair cannot proceed.

These elements must be supplied continually in the food. In Howell's Text Book of Physiology, 5th edition, we find this definition of food and foodstuffs: "Food and foodstuffs—The term food when used in a popular sense includes everything we eat for the purpose of nourishing the body. From this point of view the food of mankind is of a most varied character, comprising a great variety of products of the animal and vegetable kingdoms."

From the scientific point of view, a foodstuff or food may be defined as a substance absolutely necessary to the normal composition of the body, as in the case of water and salts, or as a substance which can be acted upon by the tissues of the body in such a way as to yield energy heat, for example, or to furnish materials for the production or repair of living tissues. Moreover, to be a food in the physiological sense the substance must not directly or indirectly affect injuriously the normal nutritive processes of the tissues.

After the food has been properly prepared, in the natural laboratory which is within us, for circulation and use in the body, it is absorbed into the blood and lymph, and transported to every part of the body, there to be utilized by the cells in the work for which it was prepared.

The fruits, grains, and other foods we eat today, tomorrow are walking about, thinking, speaking, engaging in all the activities of life, having been, by the wonderful life within us, transformed into human flesh and incorporated into the fabric of the body. After all, man is only transfigured dust. Don't worry, let the other fellow walk the floor.—O. H. JONES.

GLENDALE FOOTHILLS

Mr. and Mrs. E. L. Ballenger, 1464 Arden avenue, motored to Eastlake park, Los Angeles, Sunday afternoon, and also to La Canada.

Mr. E. L. Ballenger's song, "I Never Knew," is becoming quite a favorite with the public. It has been sung at various concerts. On Sunday it was sung by Dan Krueger, the well-known singer, at the band concert in Eastlake park, Los Angeles, in the afternoon, and also at Westlake park band concert in the evening. The public of Glendale will probably have an opportunity of hearing it at some of the coming band concerts.

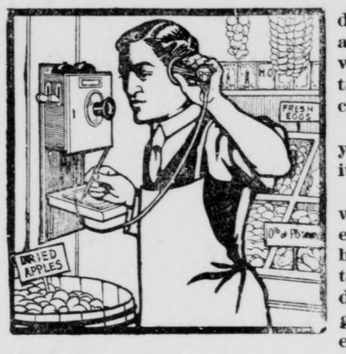
Miss Viola Yorba of Casa Verdugo is paying a visit to her relatives in Pasadena.

Miss Viola Yorba and Mr. Ernest Martinez have been engaged to dance several Spanish dances and ballroom dances at the Knights of Columbus entertainment, at the Knights of Columbus hall, Los Angeles, tomorrow evening.

In parts of the West the Forest Service is co-operating with the Weather Bureau in distributing weather forecasts to the settlers. By the use of Forest Service telephones many isolated sections are reached which could not otherwise receive the reports. Sheepmen owning bands of lambing ewes will be particularly benefited, as the warnings enable them to get their sheep under shelter and avoid the losses sometimes caused by late spring storms.

A new fire-fighting tool has been invented by a forest ranger in California which consists of an interchangeable hoe and rake. It is said to be the best tool of the sort yet devised.

This Store Is As Near To You As Your Phone



It is often a task to shop during the hot days of summer, as it is during the rainy days of winter. This is particularly true if you take the trouble to come down for small purchases.

There's a "live wire" from your home to our store. Let it serve you.

There's always some one waiting at the phone at our end of the line and there will be no delay in the taking and the filling of your order and no delay in the delivery of the goods—for coupled with the easy method of shopping by phone is our prompt

NEW RIVER STEAMERS

The arrival at New Orleans of the first of an extensive fleet of power barges, built by the Inland Navigation Company for freight handling upon the Mississippi river, marks the revival of a new era of shipping on that river, and of activity and importance for New Orleans as a port. The first cargo consisted of a wide variety of freight from toothpicks to automobiles.

The barge was built at Jeffersonville, Indiana, at a cost of $94,000, and seven more of the same type are under construction. It is expected that thirty-five will ultimately be built. Inasmuch as the freight is carried entirely on the deck, it has been possible to make the barges so that they will have no difficulty in operating in shallow water, for they draw a maximum of seven and one-half feet of water.

They have been constructed entirely of steel. Electricity is used throughout for steering and even for cooking, and internal-combustion engines using kerosene for fuel are employed as a source of power. It will be seen that this marks a considerable departure from the old, side-wheel, wooden steamer which used to scatter sparks about, and not infrequently burn to the water line.

THE PLAY PART OF LIFE

"Poor man—he doesn't know how to play; he has never learned."

The "poor man" chanced, says an exchange, to be a comparatively rich man, prominent in the business life of his city, and a real factor in the higher life of the community. In any philanthropic undertaking or missionary campaign, he is one who puts his shoulders to the wheel and helps bring things to pass.

And yet he is a poor man in his play life. He doesn't know how to play; he never learned. All he does is to stand by and look on. He cannot play bowls or golf, he has no modern hobby in the line of recreative pastime.

Poor man, indeed. How much he has missed and is missing in his life that is otherwise admirable and worthy of imitation! How much more effective his life work, efficient as it is, would be if there were a corresponding play part to it; how the one would balance the other, contributing to physical health. The joyous expression of physical life would give zest and life to all other activities.

Sensible is he who includes play life in his program.

A NEW FIELD

It is reported that the newly formed $50,000,000 corporation, which has for its object the promotion of foreign trade between the United States and other countries, purposes to employ a large number of young men and educate them for permanent positions in the foreign field. Most of the young men will be selected from college graduates. If the proposed plan is realized in the future, it will undoubtedly be one of the most important and vital steps yet taken by American business men to reach out after and try to hold foreign trade. Incidentally it will open an immense field of endeavor for the enterprising young men of America.

AERIAL MAIL SERVICE

Bids were opened recently at the Post Office Department in Washington, on the Government's first aerial mail-service routes, which are to be in Alaska and Massachusetts. If the service proves successful a gradual expansion will follow to other routes where transportation is slow or inadequate.

Seven routes in Alaska will form a connecting link between Seward and Nome; thence to Fairbanks and back to Valdez. The longest route is 357 miles. The Massachusetts route is from New Bedford to Nantucket, fifty-six miles and return. The present cost of carrying the Alaskan mails is high, on some of the routes as much as $100,000 a year.

CENTER OF POPULATION

A monument is to be erected on the exact center of population of the United States, which is in Smith County, Kansas. If the plan to raise a fund, which has been launched by the Smith Center Commercial club, meets with the success expected, surveys will be made at once to determine the exact location of the monument.

According to all known surveys the spot is in the northwestern quarter of section seven, township two, and range thirteen, all of which will be recorded on the monument with the statement that it marks the center of population in the United States.

An immense central railway station has just been completed in Tokyo, Japan. The floor area is 29,000 square yards.

BACK TO THE FARM

The vacation-school children had enjoyed a day of undisturbed pleasure, says "The Advocate," and at evening, with arms and pockets loaded with treasures, gathered in happy groups to take the cars back to the city. The careful teachers "counted the sheep" in their merry flocks.

"Yes, all here," called one after another—all but Miss Dalton.

"Why, three of my boys are missing," she cried. "Where can they be?" And off she ran to hunt them, followed by one or two of the other teachers.

They found them down by the river, cooling their feet in the clear running water, almost out of sight among the tall grass and shadows.

"Boys! boys! Whatever are you doing?" cried Miss Dalton. "Don't you know we're all ready for home? You might have got left! Come this minute!"

No response.

"Come, boys, we can't wait for you," she repeated insistently.

The eldest looked up steadily. "I don't want to go home," he said.

"Don't want to go home?"

"No, an' Tom don't, er Bud."

"Well, and what are you going to do?"

"Goin' to stay here an' be farmers."

Notwithstanding their determination, Miss Dalton marched them off, but as they left the green fields and entered again the crowded city, she thought of where the three would probably sleep that night and wished with a sad heart that they might "stay in the country and be farmers."

USE FOR SAGE BRUSH

"Profitable sage-brush growing" is likely to be made the title of an agricultural publication by the Department of Agriculture in the near future. The hitherto insignificant desert weed is to be made a source of profit in the form of soluble potash. Experiments are being conducted in southern Utah and Nevada at the present time that promise to lead to the production of potash from the sage brush in commercial quantities.

The sage brush is first reduced to ashes from which the potash is obtained. It appears that the leaves and smaller branches contain more potash than the trunk; therefore care is taken, so far as is possible, in preserving these parts of the plants.

FRENCH ENTERPRISE

The recent opening of the canal which connects Arles, on the Rhone, with Marseilles, France, comes as a surprise to those who are under the impression that France had laid aside all plans for internal improvement during the present stress of circumstances. The original plans were adopted in 1903. The engineering obstacles were great, especially the tunnels under the Nerche Hills northwest of Marseilles.

The new enterprise means a great deal to the interior of France and to the port of Marseilles which is to be made a "free port." Commerce by the inland waterway will be limited to barges. Their width is about twenty-five feet and new canal is wide enough for two barges to pass. This work is only one of many which France is undertaking to make the future one of great commercial and industrial development within the republic.

THE BOY ON THE FARM

I Will

I will start anew this morning with
a higher, fairer creed;
I will cease to stand complaining of
my ruthless neighbor's greed.
I will cease to sit repining while my
duty's call is clear;
I will waste no moment whining and
my heart shall know no fear.

I will look sometimes about me for
the things that merit praise;
I will search for hidden beauties that
elude the grumbler's gaze;
I will try to find contentment in the
paths that I must tread;
I will cease to have resentment when
another moves ahead.

I will not be swayed by envy when
my rival's strength is shown;
I will not deny his merit, but I'll
strive to prove my own;
I will try to see the beauty spread before me, rain or shine;
I will cease to preach your duty and
be more concerned with mine.

—British Weekly.

AN ENGINEER'S RECORD

This month Irving R. Daly will complete his forty-two years of continual service as engineer on the New York Central Railroad out of Clayton, New York. During this time he has covered with his locomotive 2,075,000 miles, or 20,000 miles more than seventy-nine times around the world at the equator. His record is unique among railway engineers.

He entered Clayton with the first train that ever ran into that city, and he is running into Clayton today in the same old way. A careful inspection of the records of the railroad company do not show a single accident charged against his account during all this time.

About 700 million feet of timber was cut on the National Forests in 1915.

LITTLE THINGS

Only a litle shriveled seed—
It might be a flower or grass or
weed;
Only a box of earth on the edge
Of a narrow, dusty window ledge;
Only a few scant summer showers;
Only a few clear, shining hours:
That was all. Yet God could make
Out of these, for a sick child's sake,
A blossom-wonder as fair and sweet
As ever broke at an angel's feet.

Only a life of barren pain,
Wet with sorrowful tears for rain;
Warmed sometimes by a wandering
gleam
Of joy that seemed but a happy
dream.
A life as common and brown and
bare
As the box of earth in the window
there;
Yet it bore at last the precious
bloom
Of a perfect soul in a narrow room—
Pure as the snowy leaves that fold
Over the flower's heart of gold.

—Henry van Dyke.

HE WHO IS IN DEMAND

Men seeking help do not look for idle men. Those who are in demand for important places, positions of trust and spheres of special activity are not the idle man. Idleness indicates either laziness or inefficiency, and such men are wanted nowhere. The busy life is the really useful life. It is the more effective in every sphere. The old German motto is eminently true, "Rast ich so rost ich." It is better far to wear out than to rust out.

RAISING MINKS

For several years an expert of the Biological Survey has been experimenting with the raising of minks in captivity. These animals are native to a large part of North America, and their fur is one of the most beautiful and durable varieties on the market; hence to raise them successfully would make quite an important industry. It promises to be a side line worth looking into on the part of boys and young men on the farms.

Live minks are worth from $30 to $125 a pair, according to size, color of fur, and disposition. A tame docile mink will thrive and breed much better than one that seems unable to forget its wild life. Ranch-bred minks bred in captivity are always worth much more than those caught wild.

The government is now preparing to operate a modern fur farm in northern New York, and will stock it with minks and martins during the present summer. Here further experiments will be carried on in the interesting occupation of animal farming.

CAMP FIRE GIRLS

The membership in the organization of the Camp Fire Girls of America now amounts to 70,000 and reports indicate that it is rapidly increasing; that its scope and influence are broadening, and that it is doing a valuable work.

The president of the organization has asked the 7,000 guardians of the 70,000 members to undertake the study and discussion of the following questions:

What does it mean to die for America? Is America worth dying for? In what respects? Is it because we are so wealthy or so learned or so smart? Is it because we happen to be born here? When you say America what do you mean? What makes this country significant?

These queries might well be pondered with profit by young men as well as by young women, and such consideration is sure to be productive of the right sort of patriotism.

UNCLE SAM'S CAMPING GROUNDS

The forest reservations mean far more than the preservation of our timber resources. They are beginning to become natural parks for recreation and life in the open. Millions of health and pleasure seekers can enjoy them through the generosity of the government, as shown by the records made by the forest service. Already the rangers have extended the hand of welcome to a large number of visitors to the national forests.

NOTICE TO CONTRACTORS

The Trustees of the Glendale Union High School District invite sealed bids for the furnishing of labor and material and the construction of a reinforced concrete Cloister connecting Administration and Household Arts Buildings, as per plans and specifications of Marsh & Howard, Architects for said Board.

Plans and specifications can be obtained from I. H. Oliver, Clerk of the Board of Trustees at Glendale, Cal. All bids to be accompanied by a certified check or bid bond for 5 per cent of the amount of bid.

Bids will be received by Mr. Oliver, Clerk, up and until 5 p. m. July 14th at Glendale, Cal.

The Board reserves the right to reject any or all bids.

Done by order of the Board of Trustees, Glendale Union High School District, at Glendale, Cal., June 26th, 1916.

DR. A. L. BRYANT, Pres.
Attest: I. H. OLIVER, Clerk.
